FOR IMMEDIATE RELEASE

Wall Street Blockchain Alliance Launches AI & Quantum Working Group

New York, NY – [Thursday, May 28, 2026] – The Wall Street Blockchain Alliance (WSBA) today announced the launch of its new **AI & Quantum Working Group**, an initiative focused on examining the growing impact of artificial intelligence and quantum computing on financial markets, digital assets, and cryptographic infrastructure.

The working group will explore how advances in AI are reshaping trading, compliance, operational decision-making, and financial market infrastructure, while also assessing the implications of quantum computing for encryption, blockchain security, and long-term system resilience. Particular attention will be given to emerging areas including post-quantum cryptography, AI governance, and the intersection of advanced computing technologies with financial regulation and market integrity.

The AI & Quantum Working Group is the first in a broader series of expanded WSBA initiatives designed to address emerging technologies and evolving market structure considerations impacting the digital asset and financial services ecosystem.

"The intersection of AI, quantum computing, and digital assets represents one of the most important emerging conversations in financial markets today," said Ron Quaranta, Chairman of the Wall Street Blockchain Alliance. "Through this working group, WSBA aims to bring together experienced practitioners and subject matter experts to help advance thoughtful dialogue around these rapidly evolving technologies."

The working group will be chaired by Chrissy Hill, Founder of Dreadnought Solutions, and Adele Hogan, Partner at Cohen & Gresser LLP.

"Fearlessly navigating the digital frontier means properly engaging with the technologies that will actually shape it. The convergence of AI, quantum computing, and digital assets demands a new kind of regulatory architecture and mindset. One that is built for the systems we're deploying, not retrofitted from the ones we're leaving behind. I'm honored to co-chair this WSBA working group alongside Adele to explore and map this frontier" noted Chrissy Hill.

"The convergence of artificial intelligence and quantum computing is poised to fundamentally transform financial and other markets, from trading strategies and risk management to the very foundations of cryptographic security," said Adele Hogan. "We look forward to bringing together leading voices across industry, law, and technology to help shape thoughtful governance, promote responsible innovation, and ensure the resilience of our digital financial and blockchain infrastructure. I'm thrilled to co-chair this important initiative with Chrissy Hill for the WSBA".

Participation in WSBA working groups is open to member firms and invited guests, providing a forum for collaboration, education, and thought leadership across the global digital asset ecosystem.

About the Wall Street Blockchain Alliance

The Wall Street Blockchain Alliance (WSBA) is an industry leading non-profit trade association, with a mission to advocate, guide and promote comprehensive adoption of blockchain technology and digital assets across global markets.

For information about the WSBA, including membership, visit www.wsba.co or email to info@wsba.co. For media inquiries, email media@wsba.co.
