Wall Street Blockchain Alliance Welcomes Vouched as Newest Corporate Member

New York, NY – August 25, 2026 – The Wall Street Blockchain Alliance (WSBA) today announced that Vouched, the leader in AI-powered identity verification, has joined the Alliance as its newest corporate member.

As AI agents increasingly transact on behalf of humans and other agents, critical questions emerge around identity, authorization, and accountability. Vouched's Know Your Agent (KYA) platform addresses these challenges by identifying and classifying agents, applying policy when they act, and maintaining a verifiable record of delegated permissions. Underlying the platform is KYA-OS, the open agent identity standard Vouched authored and donated to the Decentralized Identity Foundation, providing identity, delegation, and cryptographic proof for areas the Model Context Protocol leaves undefined.

"We are delighted to welcome Vouched to the WSBA community," said Ron Quaranta, Founder and CEO of the Wall Street Blockchain Alliance. "Digital identity and verifiable credentials are becoming foundational components of the next generation of digital commerce and financial infrastructure. Vouched has demonstrated meaningful leadership in privacy-first identity verification, compliance automation, and trusted digital credentials. Their expertise will provide valuable perspectives across the Alliance as our members continue to explore the intersection of digital identity, blockchain, AI, and regulated financial services."

"Financial organizations and capital markets are leading the agentic wave with a focus and energy unlike we have seen elsewhere. Wall Street Blockchain Alliance has built a tight-knit group of people who excel at execution," said Rosalyn Curato, Chief Innovation Officer & Chief Customer Officer at Vouched. "We are joining the WSBA to support acceleration of agentic AI in finance through a shared agentic identity industry standard."

About Vouched

Vouched is pioneering the future of identity verification by delivering technology that quickly and securely validates the identities of both AI agents and humans. The recognized leader in identity verification for healthcare, Vouched has expanded its capabilities across financial services, automotive, and other industries. Vouched is writing the next chapter of the CISO playbook to take advantage of digital IDs and to identify software agents. Each month, Vouched verifies millions of identities with unmatched speed, accuracy, and regulatory compliance–accelerating trust in an increasingly digital world.

About the Wall Street Blockchain Alliance

The Wall Street Blockchain Alliance (WSBA) is a leading non-profit trade association advancing the responsible adoption of blockchain technology and digital assets across global markets through education, collaboration, and industry engagement.
